

PHC Infrastructure Development Project Siddapura, Bangalore Urban

Impact of the Initiative

- Improved accessibility of people to a wide array of quality diagnostic primary health care services
- Better infrastructure and an increased access to diagnostic tests has increased patient footfall.

Major Activities

**Infrastructure
& Renovation**

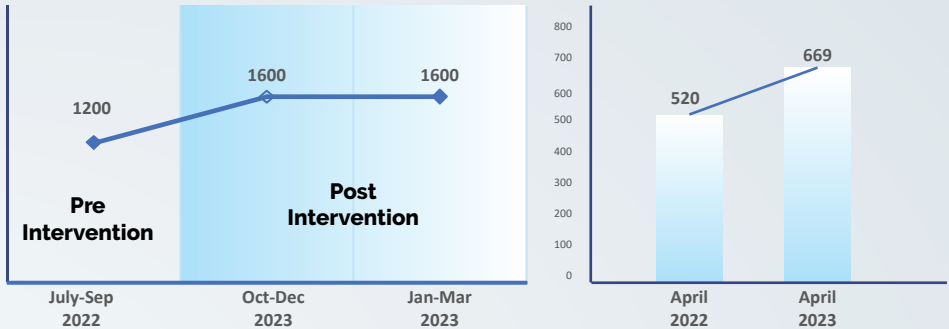

**Development of
Lab-Container**

**Medical
Equipment**

Patient Footfall Pre and Post Intervention

I am working as Lab Technician since 2017 in this PHC. Previously, laboratory was not having proper ventilation and the condition of laboratory was poor. Patients were hesitant to come for testing which was leading to low testing.

PPHF and GE HealthCare came forward for supporting lab container (Diagnostic) The interior infrastructure in the lab is good with proper ventilation and spacious. With this infrastructure support, patients are coming forward for laboratory testing, patients are feeling comfortable & happy and footfall has increased.

I personally feel motivated and happy to work in this kind of environment created by PPHF and GE HealthCare

- **Veena** (Lab Technician at Siddapura UPHC)

I would like to thank GE HealthCare and People to People Health Foundation for uplifting the OPD and Lab infrastructure.

We are happy to work under such a pleasant and comfortable working atmosphere which is definitely going to improve both the quality and quantity of work.

Thanks once again for bringing smile on our face and also on patients'.

- **Dr. Sumathi** (Senior Medical Officer, Siddapura UPHC)
